

human resources.

Earth 200 billion years ago (only animals)

20 more years (no Innovation)

1 billion year ago
(no change)

2 million years ago
humans emerged

2 million years with
humans :

Human civilization now

ever thought why?

Ans. due to humans and human resources.

- * Humans are the most important resource of a country, business, world etc as they contribute towards its growth.
 - * the above thing is only possible due to the passionately working humans towards the growth of the world. Therefore, humans are important and population isn't bad. It is the governing System who is bad.

→ Distribution of population.

Have you ever wondered why
is there such a big variation?

NO! then check the factors out today.

2. physical features

the geographical features like terrain, location, plays a major role attracting people. like most plains are densely populated as it is more convenient for structures to build.

mountain

Inconvenient and expensive city on one side.

Problems

- temperature
- terrain
- unpredictable climate

Climate

There are areas of all types, which have high rainfall, high temp., High humidity, etc. places with all these things in moderate amount is kind of an ideal place and may attract people, like bangalore, Delhi, mumbai etc.

this Shows that climate affects Industries.

Resources

Population may also be affected by the presence of Resources like minerals, soil, water, etc.

Q: where would you live to civilize your city?

Industrialization.
